

## Document Recognition Products

Calleo is a Toronto based business and technology consulting company, with a strong focus to assist our clients to reduce paper within their work flow and remove the inefficiencies associated with paper based processing. We implement software, which work towards making our customers front office environment more L.E.A.N in nature. Our product strengths are by design - attributable to our solid understanding of the Document Recognition space and the real needs of our customers. With these attributes in mind we have spent a significant amount of time developing our own in-house software components which compliments our product partnership alliances. All services & technology products are structured to move you closer towards reducing your organizational inefficiencies.

**Recognition Server** Is a software technology produced by AbbyyUSA. Recognition Server is a robust and powerful server-based OCR solution for automating document conversion processes across corporate departments and enterprises. Recognition Server is ideal for high volume conversion of printed or image documents into searchable formats such as PDF and PDF/A, XML, Word, Excel, JPEG, TIFF, etc. for mass digital archiving and/or editing. Recognition Server can be used as both a turnkey solution and an integral part of document capture, document management, and back-end systems.

**FlexiCapture** Is a software technology produced by AbbyyUSA. The software will allow you to read documents (paper, PDF, or images), recognize (OCR or ICR) and extract information from your documents, validate the extracted information and the 'push' the extracted data to the system of your choice (database, ERP, CRM, spreadsheet, ODBC, etc.). FlexiCapture is typically used in high volume applications such as, Accounts Payable Invoicing, Customer Survey, K1 Form Processing, etc.

**Calleo Connector For Accpac** Is a Calleo Technology Inc. developed software component that will bridge the gap between FlexiCapture and your destination data repository. The Calleo Connector performs additional validations on the FlexiCaptured data, assigns necessary General Ledger and vendor information to the outgoing invoice data, gives the operator one last chance to modify the invoice information, and then produces an export file in the exact structure Accpac is expecting the data.

**Document Scanners** Here you will find the necessary information that you will need to locate document scanners. Document Scanners is an important component to moving your business towards a less-paper and more efficient business environment. FlexiCapture, Recognition Server and the Calleo Conector for Accpac are dependent on document scanners as an input mechanism to its business processes. Understand how to select the correct Document Scanner for your business application.
